Japan**

Report on the Quality of Land Surface Observations in Region II
(No. 63)
January – June 2022

Summary

In its role as a Lead Center, RSMC Tokyo has issued the 63rd report on the land surface observation quality monitoring for the period from January to June 2022. The report includes a consolidated list of stations suspected of producing low-quality observation data.

(1) SLP

As a result of monitoring, four stations (38232, 38836, 42295, 44424) were excluded from the consolidated lists of the previous report (July – December 2021), and two stations (41244, 48925) were newly added to the lists.

(2) MSLP

As a result of monitoring, two stations (38232, 40587) were excluded from the consolidated lists of the previous report (July – December 2021), and one station (41244) was newly added to the lists.

(3) GZ

As a result of monitoring, two stations (42295, 44424) were excluded from the consolidated lists of the previous report (July – December 2021).

1. Introduction

Pursuant to Paragraph 22 of Attachment II.7 of the Manual on the Global Data Processing and Forecasting System (WMO No. 485), the Regional Specialized Meteorological Center (RSMC) Tokyo was designated by the President of the Commission for Basic Systems (CBS) as a Lead Center for monitoring the quality of land surface observations (i.e., SYNOP) in Region II in March 1991. The Center is responsible for monitoring the quality of land surface observations and maintaining consolidated lists of stations suspected of reporting low-quality observation data together with adequate evidence. The lists are to be passed on to the WMO Secretariat and monitoring centers participating in this activity as well as to Members of Regional Association (RA) II for their reference.

2. Monitored Data

Monitored surface observation data are obtained at 00, 06, 12 and 18 UTC and collected at RSMC Tokyo before the data cut-off time, defined as the end of the period in which observation data are gathered for operational analysis. The cut-off times for Japan Meteorological Agency (JMA) global analysis are shown in Table 1.

Table 1 Data cut-off times for JMA global analysis.

Analysis time	Data cut-off time
00 UTC	11:50 UTC
06 UTC	13:50 UTC
12 UTC	23:50 UTC
18 UTC	01:50 UTC

The observation elements monitored are (1) station level pressure, (2) mean sea level pressure and (3) geopotential height, hereafter referred to as SLP, MSLP and GZ, respectively. In accordance with the Manual on Codes (WMO No. 306) Volume II, GZ data on an agreed standard pressure level are reported at the stations whose elevation is higher than 800 m. Standard pressure levels defined in line with station elevation are shown in Table 2.

Table 2 Elevation of stations reporting GZ data and corresponding standard pressure levels.

Station elevation (m)	Pressure level (hPa)
800 - 2,300	850
2,300 - 3,700	700
Higher than 3,700	500

The numbers of stations reporting SLP, MSLP and/or GZ data in Region II are shown in Table 3, and the locations of these land surface stations are shown in Figure 1.

Table 3 Numbers of stations reporting SLP, MSLP and/or GZ data in Region II

Element	Number of stations
SLP	1894
MSLP	1993
GZ	87

3. Monitoring Methods

The three items described below are examined for each element.

- (i) Monthly statistics on observation deviations from the most recent forecast of JMA's global model (referred to as first-guess values) (observation minus guess, hereafter referred to as O-G) and on related trends over the monitoring period
- (ii) Monthly statistics on deviations from values observed at surrounding stations
- (iii) Reference information from other monitoring centers

Information on the latitude, longitude and altitude of each station is necessary for calculation of first-guess values. Such data for land surface station locations is retrieved from the surface-based observing

system component of the Observing Systems Capability Analysis and Review Tool (OSCAR/Surface)* , replacing WMO No. 9, Volume A.

The monitoring procedure has two steps as outlined below.

(1) Exclusion of data with gross errors from the statistical calculation sample

The following thresholds are applied for the gross error check in the first step:

$$\begin{aligned}|O-G| &\geq 15 \text{ hPa for SLP and MSLP} \\ |O-G| &\geq 100 \text{ gpm for GZ}\end{aligned}$$

Gross error data are excluded from the calculation of BIAS (the mean of O-G) and SD (the standard deviation of O-G).

(2) Identification of suspect stations

When the total number of observations (NOBS) is 181 or more, the next criteria are applied:

- BIAS	$ BIAS \geq 3 \text{ hPa for SLP and MSLP}$
	$ BIAS \geq 30 \text{ gpm for GZ}$
- SD	$SD \geq 5 \text{ hPa for SLP and MSLP}$
	$SD \geq 40 \text{ gpm for GZ}$
- Percentage of gross errors (PGE)	$PGE \geq 25\%$

Stations with even one statistic exceeding the threshold are considered suspect.

Note:

- (i) The quality of observation data from stations is not checked when the NOBS value is less than 181 or the difference between the station elevation and the model elevation is greater than 1,000 m. MSLP reports are also not checked for stations located at altitudes higher than 1,000 m above sea level.
- (ii) In case of low quality of the first-guess field, those statistics can exceed the threshold and the stations are listed in the consolidated list. To avoid such situations, statistics of surrounding stations and information from other monitoring centers are also used to judge whether the quality of the station's first-guess field value is appropriate.

- 38318** - Negative bias of O-G at the station level (Figures 9 and 11)

UZBEKISTAN

- 38262** - Positive bias of O-G at the station level (Figures 7 and 8)

TAJIKISTAN

- 38836** - Negative bias of O-G at the mean sea level (Figures 12 and 13)
- 38875** - Positive bias of O-G at the station level (Figures 9 and 14)
- 38944** - Negative bias of O-G at the station level and at the mean sea level (Figures 9, 12 and 16)

TURKMENISTAN

- 38880** - Positive bias of O-G at the station level (Figures 7 and 15)

IRAN, ISLAMIC REPUBLIC OF

- 40877** - Negative bias of O-G at the mean sea level (Figures 17 and 18)

OMAN

- 41265** - Negative bias of O-G at the station level (Figures 19 and 20)
- 41315** - Positive bias of O-G at the station level and Negative bias of O-G at 850 hPa (Figures 21 and 22)

PAKISTAN

41573 - Positive bias of O-G at the station level (Figures 23 and 24)

INDIA

42056 - Negative bias of O-G at the station level (Figures 23 and 25)

42083 - Positive bias of O-G at the station level (Figures 23 and 26)

42111 - Positive bias of O-G at the station level (Figures 23 and 27)

42114 - Negative bias of O-G at the station level (Figures 23 and 28)

42147 - Positive bias of O-G at the station level (Figures 23 and 29)

42299 - Positive bias of O-G at 850 hPa (Figure 30)

SRI LANKA

43418 - Positive bias of O-G at the station level (Figures 31 and 32)

43479 - Negative bias of O-G at the station level (Figures 31 and 33)

NEPAL

44406 - Positive bias of O-G at the station level (Figures 23 and 34)

44429 - Negative bias of O-G at the station level (Figures 23 and 35)

KOREA, DEMOCRATIC PEOPLE'S REPUBLIC OF

47037 - Negative bias of O-G at the station level and at the mean sea level (Figures 36, 37 and 38)

KOREA, REPUBLIC OF

47102 - Positive bias of O-G at the station level (Figures 36 and 39)

47145 - Negative bias of O-G at the station level (Figures 36 and 40)

47152 - Negative bias of O-G at the station level (Figures 36 and 41)

MYANMAR

48001 - The percentage of gross errors (PGE) is equal to or greater than 25% (Figures 42 and 43).

48018 - Positive bias of O-G at the station level (Figures 42 and 44)

48062 - Positive bias of O-G at the station level (Figures 45 and 46)

48085 - Positive bias of O-G at the station level (Figures 45 and 47)

48107 - Negative bias of O-G at the station level (Figures 45 and 48)

LAO PEOPLE'S DEMOCRATIC REPUBLIC

48921 - Negative bias of O-G at the station level and at 850 hPa (Figures 42 and 49)

48935 - Negative bias of O-G at 850 hPa (Figure 50)

48952 - Positive bias of O-G at the station level (Figures 51 and 52)

CHINA

54945 - Negative bias of O-G at the station level (Figures 36 and 53)

56946 - Negative bias of O-G at the station level (Figures 42 and 54)

56951 - Negative bias of O-G at the station level (Figures 42 and 55)

57731 - Negative bias of O-G at the station level (Figures 56 and 57)

58921 - Negative bias of O-G at the station level (Figures 58 and 59)

59632 - Negative bias of O-G at the station level (Figures 60 and 61)

4.2 Stations where quality deteriorated during the period

Table 5 List of suspect land surface stations where quality deteriorated during the period

WMO IDENT	LAT (N)	LON (E)	H (m)	HM (m)	ELEM	NOBS	PGE (%)	SD	BIAS	RMS
41244	24.2	55.9	372	438	SLP	643	13	5.7	-0.2	5.7
					MSLP	646	14	5.6	-0.9	5.7
48925	20.7	102.0	636	950	SLP	514	1	1.1	-3.6	3.8
					MSLP	514	0	1.5	-1.7	2.3

OMAN

41244 - O-G at the station level and at the mean sea level has been fluctuating wildly since February 2022 (Figures 17, 19 and 62).

LAO PEOPLE'S DEMOCRATIC REPUBLIC

48925 - Negative bias of O-G at the station level (Figures 42 and 63)

4.3 Stations improved and excluded from the previous consolidated list

KAZAKHSTAN

38232 - The positive bias of O-G at the station level and at the mean sea level has improved since May 2022 (Figure 64).

4.4 Stations removed from the previous consolidated list

TAJIKISTAN

38836 - Although station 38836 still displays negative biases of O-G at the station level, it was removed from the consolidated list because the biases did not exceed the threshold (Figure 65).

KUWAIT

40587 - Station 40587 was removed from the consolidated list because observed values of mean sea

level pressure were unnaturally constant during the period, and the number of reports (87) was insufficient for quality checking (Figure 66).

INDIA

42295 - Although station 42295 still displays positive biases of O-G at the station level and at 850 hPa, it was removed from the consolidated list because the number of reports (131) was insufficient for quality checking (Figure 67).

NEPAL

44424 - Although station 44424 showed no particular change in the O-G bias trend at the station level or at 700 hPa, it was removed from the consolidated list because the difference between the station elevation (2,300 m) and JMA's model elevation (3,315 m) exceeds 1,000 m due to a change from 3,288 m in March 2021 (Figure 68).

5. Possible Causes of Remarkable and Sustained Biases

The following are possible causes of remarkable and sustained biases

- (i) The barometer used for observation is not correctly calibrated.
- (ii) The latitude, longitude or altitude of the station in OSCAR/Surface has not been updated in a timely and appropriate manner. This could result in remarkable biases because it may cause incorrect calculated first-guess field values.
- (iii) Biases are specific to the NWP model used in quality monitoring.

Note: Model biases are likely to appear in relatively large areas.

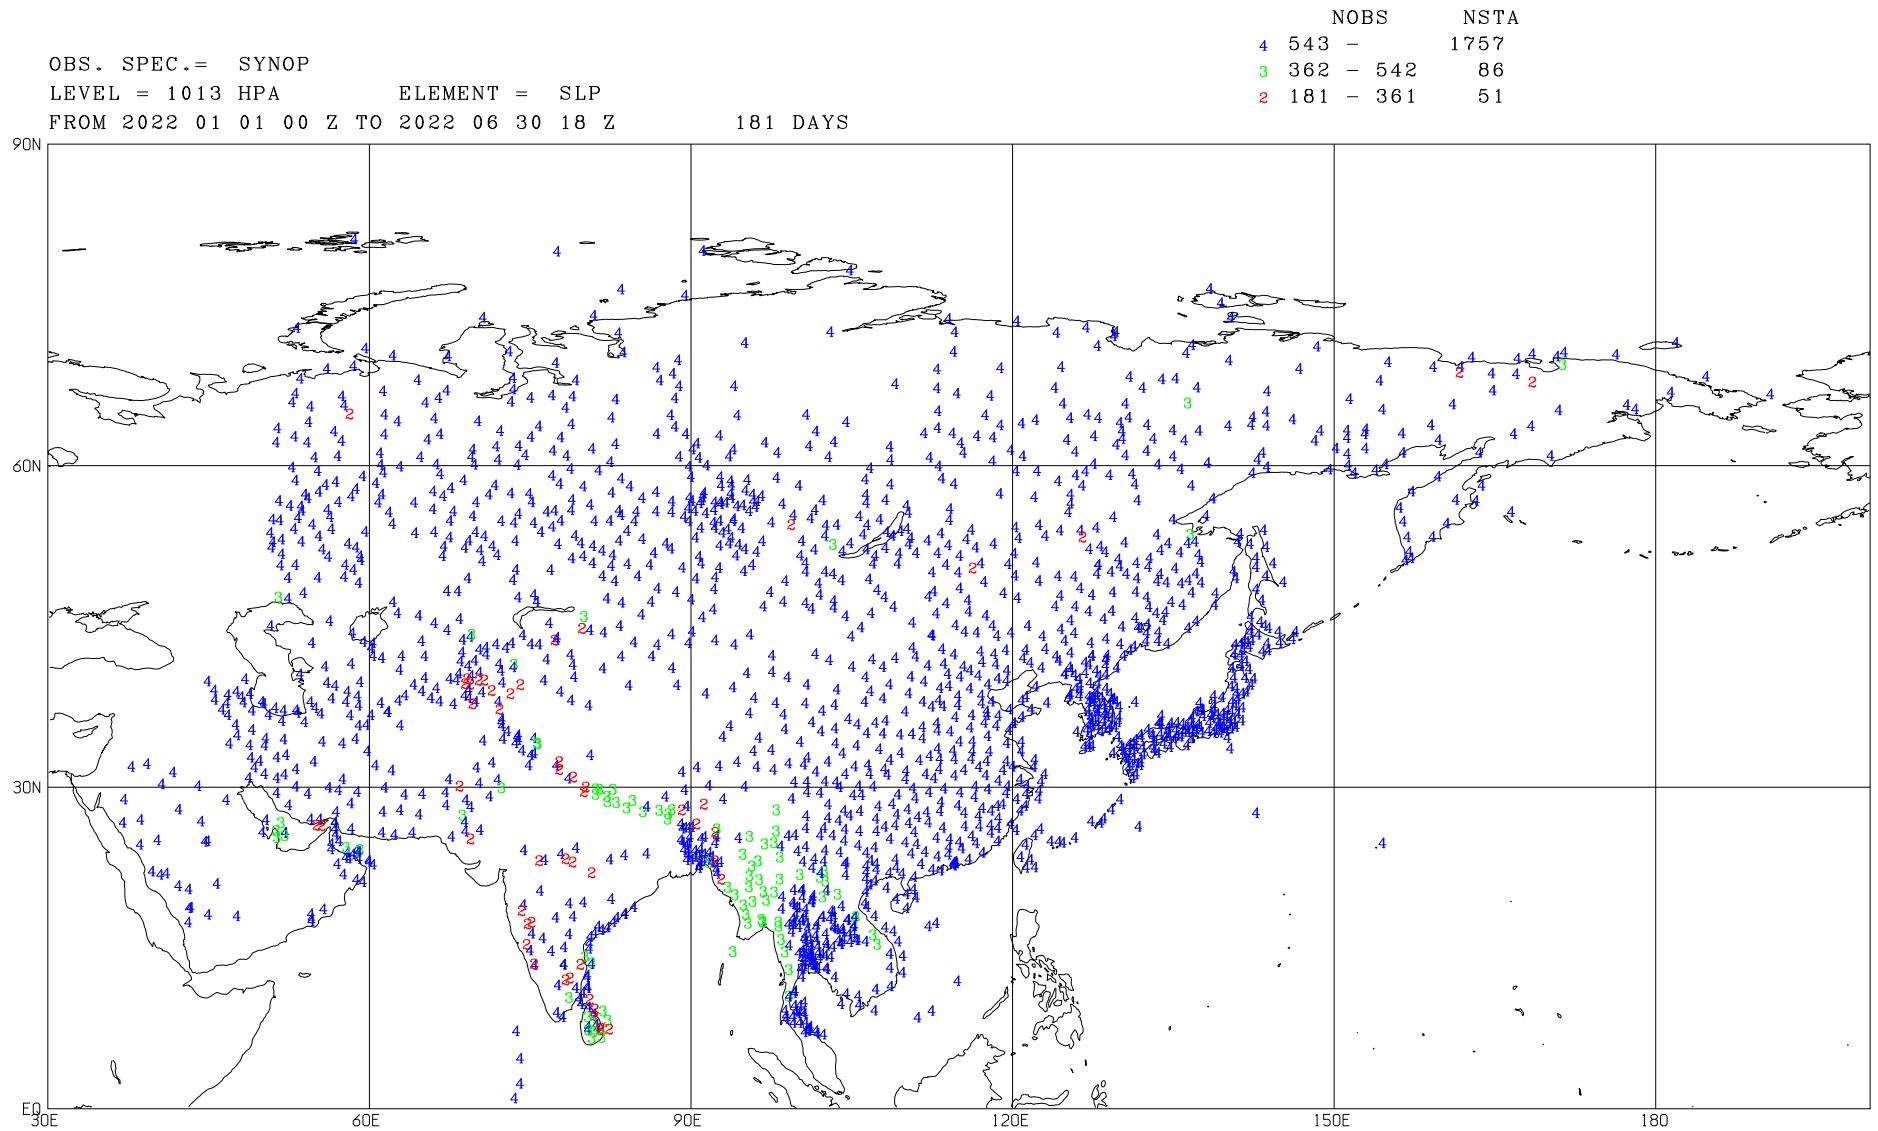

Figure 1(a) Location of all land surface stations reporting station level pressure (SLP) observations in Region II over the six-month period from January to June 2022. Numbers (2, 3, 4) show the total number of observations (NOBS) received at RSMC Tokyo. The total numbers of stations (NSTA) reporting SLP are shown at the top of the figure.
